

HEM HEATER

The 'HEM' series of indirect fired heaters are designed to fire applications where process air is to be heated from ambient temperatures up to the process plant requirements. The robust construction of the units makes them an ideal heat source for many industrial oven and heating systems

Typical Applications

- Spray Booths
- Drying Rooms

Technical Features

- Capacity : 660kW to 1250kW
- Fuel Types : Natural gas , LPG , Light fuel oils
