

SP BURNER

The SP series of gas burners are pre-packaged, fan assisted units designed to fire applications where fresh air is to be heated from ambient temperatures up to plant requirements; typical applications include industrial spray booths and drying rooms.

Typical Applications

- Air Replacement Plants
- Industrial Spray Booths
- Air Handling Plants
- Industrial Dryers
- Ceramic Dryers
- Drying Rooms

Technical Feature

- Turndown Ratio : 40:1
- Capacity : The standard SP burner is available in modules starting from 150kW for a 150mm long section. These sections can be combined to allow burner units in excess of 20MW to be constructed
- Fuel Types :Natural gas , LPG , Low calorific value gases
